

See It. Believe It!

Introducing Furuno's Interactive Navigation System

With the press of a single radar key, you can now display the position of a radar target precisely on your GPS plotter's electronic chart display.

In an instant, you'll know whether the target is a buoy or other fixed object, or if it's a vessel that may be crossing your course.

This new and easy way to identify radar targets is the result of Furuno technology that lets the radar send target lat/lon data to the plotter. Many radars receive information from GPS/plotters, but Furuno radars now can "talk back" to the plotter.

You'll know the range and bearing of the target in relation to your own boat, and be able to set your course without a lot of complex calculations. You can even pinpoint the position of a distant boat that's catching all the fish!

Discover how fast and easy navigation and piloting can be when you link Furuno radars and GPS chart plotters together. Ask your dealer to show you Furuno's two-way conversation technology.

LCD & CRT Radars

Choose from Furuno's list 8-inch, high definition, waterproof flat screen LCD radars that start at only \$2,495 msrp. Or check out the extremely powerful Furuno 10 & 12-inch CRT radars with up to 96 nm range. Both offer excellent definition and readability in daylight or dark. All are interactive with Furuno plotters.

GP1650/GP1850 Series GPS/DGPS Chart Plotter/Sounders

The only other instrument you need to complete your nav system is Furuno's high performance GP1650 or GP1850 Series GPS color chart plotter with optional built-in differential receiver and powerful 600W RMS dual frequency echo sounder/fish finder. All housed in waterproof 5.6" or 6.5" LCD displays. Furuno plotters start at \$1,995 msrp.
