Furuno Radars – Now Showing On A Monitor Near You!

Introducing Furuno's new FR2105BB Series of Black Box Color Radars. Furuno is the first marine electronics manufacturer to create a Radar that incorporates industry standard, high quality PC monitor technology in a modular, component-based system.

Based on proven Furuno color Radar technology, the FR2105BB series allows you to customize and select the display of the Radar system according to the size limitations and requirements of the vessel. Virtually any size non-interlaced, multisync (SXGA) PC monitor in a CRT or LCD flat panel configuration can be used.

Because the FR2105BB series is modular (consisting of only three components – gearbox/transceiver,

keyboard and Radar processor unit) the installation and maintenance costs are dramatically lower. Furuno's FR2105BB series offers all of the popular features and options of the dependable and sea-worthy FR2105 Radar Series, such as: 12kW, 25kW or 50kW X-Band T/R Up and 30kW S-Band configurations; multi-color multi-level target detection; optional 40-target automatic target plotter; optional Radar chart plotter utilizing Furuno's exclusive chart with radar overlay capability; electronic full function remote interswitching; Furuno's proven commercial USCG grade antenna designs; and new microprocessing technology with high-speed, high-density gate arrays and software.
