

## Everything You Want in One Box!

*(Boat not included!)*

Furuno has made tomorrow's technology available today in the FRS1000A, B or C. These unique color LCD combination units are rugged, waterproof and space-saving. They offer professional features to meet the needs of all serious mariners. Each model incorporates an X-band radar, a highly accurate DGPS navigator and a powerful 600 W or 1 kW dual-frequency echo sounder. It also includes Furuno's exclusive chart overlay feature, which allows you to put a chart on top of your radar targets. Now you don't have to wonder if a target is a boat or a navaid, with the chart overlay you'll see it on your screen! The three versions differ in their type of radar antenna, power output and range to suit your individual radar requirements. Choose between the 4kW FRS1000A (24" Radome, 36 n.m. range), the 4kW FRS1000B (41" open array, 48 n.m. range) and the super duty 6kW FRS1000C (49" open array, 64 n.m. range). Whichever model you select, you'll marvel at the multitude of functions offered in a single unit. Each unit comes standard with an infrared remote control and a precision heading sensor.

*Some say it's ingenious.  
Others say it's leading-edge.  
We say it's about time! For years, marine electronics have been getting smaller, more functional and even more affordable. But until now, you had to buy them in separate pieces and have a lot of space on your bridge in order to have all the electronics you needed. Not anymore! Introducing the new Furuno FRS1000 series of Radar, GPS/DGPS, Fish Finder and Chart Overlay. Now you can have all the navigation and fish finding features you've always wanted in **ONE compact, space-saving unit.***
