

It doesn't get any easier than this!

NAVnet

Creating an integrated navigation system is a difficult task, but making it easy to use is almost unheard of... until now! Furuno's new NavNet series is the easiest on the market to use.

With a variety of displays, including a 10.4" color LCD, 10" CRT and 7" color & mono LCDs, you can use NavNet as a single display or multiple by using an Ethernet hub.

NavNet offers the following features:

- ▶ TRUE color Radar and Radar Overlay
- ▶ Chart plotting with Furuno, Navionics® or C-MapNT cards
- ▶ 600W or 1kW Network Fish Finder
- ▶ 12 Channel GPS Receiver

Fortunately, our engineers were able to keep it easy to use. To show you just how easy, here is a step-by-step lesson from a navigation expert showing you how to change modes. It doesn't get any easier than this!

Step 1: Press the Display Key.

Step 2: Scroll through the NavNet Menu and find the function you want to display.

Step 3: Press the dial in to Enter your selection.

Step 4: Start navigating. Any questions?
