

We've been obsessed with finding fish since we were kids.

Put our obsession to work for you!

Our engineers have been dreaming up this machine ever since they could work a screwdriver and soldering iron! The benefit to you is the ability to find more fish at a lower cost. Just check out these features pictured below:

1. **A-Scope** - The picture on the right 1/3 of the screen shows a real-time echo that clearly shows echoes and positions for observation of target depth.
2. **Bottom Zoom** - The zoom markers follow the bottom contour showing an expanded view of the bottom, whether it is flat or rugged.
3. **Nav Data** - Display numerical depth, temperature, lat/lon and more while still viewing the sounder.
4. **Mini Navigator** - Plug in the external GPS/WAAS receiver and you can enter and edit up to 12 waypoints to mark your hot fishing spots.
5. **Dual-Frequency** - See both 50 and 200 kHz soundings at the same time on a split screen for accurate shallow and deep readings (shown on unit at right).
