

Where Innovation Solves Mission Critical Needs

When you're out there protecting American interests, you want the best gear money can buy — reliable, high performance commercial-grade gear. You want systems you can count on to help get the mission accomplished.

Take our NavNet systems for example. Here we've packed our best technology from proven stand-alone units and put them into a single display.

It combines our extremely reliable Radar with a state-of-the-art chart plotter. You can display them simultaneously in a split screen, or with an appropriate heading sensor you can overlay the Radar targets right onto the chart.

Use them as separate units or leverage multiple displays by utilizing Furuno's NavNet Ethernet network. Each unit will exchange information to one another and be able to operate each component connected to the network.

As a GSA contractor, Furuno is providing the USCG with SINS (Scalable Integrated Navigation Systems) on more than 600 vessels. Each boat is equipped with a NavNet Radar/Chart Plotter, GP37 DGPS/WAAS Receiver and RD30 Digital Depth Receiver.

Contact Furuno today for an extensive list of commercial off-the-shelf (COTS), mission-critical equipment for most applications.
