

Introducing the ultimate navigation system. Just add water.

NavNet Radar/Chart Plotters

RD30 - Digital Depth and Nav Repeater

SC60 - Satellite Compass

Navigating Safely With Above and Below Technology

When it comes to navigating safely, there is no better system than the combination of Furuno's NavNet Radar/Chart Plotter, the RD30 Digital Depth/Nav Repeater and the SC60 Satellite Compass. We call this the Above and Below system. The NavNet Radar/Chart Plotter keeps you aware of what is happening above the water by integrating award winning Radar technology with a Chart Plotter that is second to none. You even get to choose from models that use either Furuno and Navionics® or C-MapNT chart cards.

Match that with the SC60 Satellite Compass and you get heading information accurate to $\pm 0.8^\circ$. This compass is a hybrid integration of GPS receiver technology and a 3-axis solid-state rate sensor. The SC60 utilizes three GPS antennas, which provides enhanced accuracy, while reducing the negative effects of pitch, roll and yaw. It's also ideal for helping to align your Radar overlay on your NavNet or for acquiring a GPS fix.

Furuno's RD30 monitors what is happening below the boat to make sure you are always aware of water depth. Together with Furuno's 235kHz Smart Sensor, the RD30 can accurately display depth in water as shallow as two feet. If temperature is a concern, the high-precision version of the Smart Sensor can display temperature in .01 of a degree. We didn't stop there, you can also use the RD30 as a Nav Repeater displaying wind data, speed, bearing, course, position and of course depth and temperature. Ask a Furuno dealer today how this ultimate navigation system can help you!
