

# We're reaching new depths to keep you informed.

## Introducing the RD30 Digital Depth & Nav Repeater.

If you are looking for a unit to show you precise depth down to 2 feet and temperature to 0.02 of a degree, then the Furuno RD30 is the answer. Simply connect the RD30 to our new Furuno Smart Sensor and you are ready to go! The Smart Sensor operates at 235kHz, which provides solid performance at high speeds, in very shallow depths and in turbulent water. It also will not interfere with other depth sounders.

The RD30 and Smart Sensor can also be added to any Furuno NavNet system, providing numerous NMEA data display modes, including: Depth, Temp, Wind Data, Speed, Bearing, Course, Position and more.
