

## The Hottest Product on the Market!

Furuno's NavNet units give you the flexibility to use them as a single, stand-alone system or as part of an integrated network bridge. Using the same network technology seen in most professional office environments, NavNet utilizes an Ethernet Network, giving virtually limitless expandability. You can have up to four displays connected simultaneously and even add a GPS/WAAS receiver antenna and a 600W/1KW Network Sounder to your NavNet Radar/Chart Plotter.

But integration doesn't stop there! You can connect multiple Radar and GPS/WAAS antennas if needed. The NavNet network will allow you to view any component on any of the NavNet displays. So if you want to have multiple displays on one bridge or single displays throughout the vessel, you will be able to fully operate every component connected to the NavNet network.

*See what the industry experts think of NavNet!*

*And the winner is...*

- 2002 Editor's Choice Award - Motorboating
