- NMEA 2001 Best of Show - NavNet
- NMEA 2001 Best Recreational Radar
- Best of 2001 - Power & Motoryacht

...NavNet & you!

## Now Available with WAAS

Whether you are looking for a wreck, searching for that perfect dive spot or simply want the best position fix at a low cost, Furuno's new NavNet WAAS receiver is the answer. This WAAS/GPS receiver plugs directly in to a NavNet unit to give you accuracy of 3 meters or better. It also has the ability to turn the WAAS capability on or off.

Two other accessories that will turn a NavNet installation into the ultimate navigation system are the RD30 Digital Depth Display and the SC60 Satellite Compass. Furuno's RD30 monitors what is happening below the boat to make sure you are always aware of water depth and temperature.

Together with Furuno's 235kHz Smart Sensor, the RD30 can accurately display depth in water as shallow as two feet and temperature in .01 of a degree.

RD30 Digital Depth

Match that with the SC60 Satellite Compass and you get heading information accurate to  $\pm 0.8^\circ$ . This compass is a hybrid integration of GPS receiver technology and a 3-axis solid-state rate sensor, which provides enhanced accuracy, while reducing the negative effects of pitch, roll and yaw. It is ideal for aligning your Radar overlay on your NavNet or for acquiring a GPS fix.
