

We've just made finding fish easier... Again!

Furuno has collaborated with MaxSea to develop the ultimate commercial fishing marine software that will efficiently transfer information from your NavNet to a PC and back again. When interfaced with a NavNet system, MaxSea-NavNet software offers the following features:

- ▶ MaxSea-NavNet Radar overlay on your PC
- ▶ Full control of NavNet display from your PC
- ▶ Share Radar, Fish Finder and other nav data from NavNet
- ▶ 2D/3D Personal Bathymetric Generator (PBG) gives you the most accurate representation of the ocean floor, as it continuously updates it with data when interfaced with your Furuno sounder
- ▶ Advanced seabed classification to identify bottom habitats
- ▶ Accurate and easy to use sea surface temperature chart overlay
- ▶ Optional ARPA Radar, AIS and fishing buoy target tracking*
- ▶ Utilize Vector or Raster charts on your PC

* Requires optional software module and/or equipment

Display trawl position in 2D and 3D and show the actual position and shape of your net. Trawl position can be captured in your logbook automatically. You can also save a track of your trawl and analyze it with the ship's track for a detailed analysis of your fishing tactics.*
