. . . would like to
introduce you to
its little brother.

The GP7000/NT Series Chart Plotter

The GP7000/NT Series is the latest entry into the GPS/WAAS Chart Plotter market by Furuno. This little wonder takes some of the best features from the award winning GP1900C, combines them with ground breaking features of its own and packages them into an ultra-bright 7" wide (16:9 aspect ratio) waterproof display! The GP7000/NT utilizes all of the new technology from C-Map NT+ charts, such as Guardian Technology, C-Forecast and C-Marina. Super-quick chart redraw, dual SD Chart / Memory Card slots, Furuno's famous Soft Key interface and an intuitive, easy-to-use menu system all contribute to making it the most robust and quite possibly the fastest chart plotter on the market.

For the fisherman, there is also the GP7000F/NT which features a menu selectable 600 or 1,000 Watt dual-frequency fish finder - the same technology that has won Furuno the NMEA Best Fish Finder award for the past 34 years! Connect a multisensor to the unit and you will be able to read depth, water temperature and boat speed.
