

Serious solutions for serious fishermen.

Pinpoint the position of fish schools around your boat using sonar.

Furuno sounders, sonars and even radars have found more fish than any other manufacturer in the world, and now we're finding more than ever! We're proud to introduce the world's first dual-frequency searchlight sonar. The CH300 is designed for a wide range of commercial fishing vessels. Both transceivers utilize a single soundome for a simple, economical installation or retrofit. When it comes to fishing above and below, look to Furuno for electronics you can depend on.

Find fish and view the sea bed contour with an echo sounder.
