

Tradition Meets State-of-the-Art Technology Furuno's FI-50 Instrument Series

For 60 years, Furuno has been the first choice for Radars, Fish Finders, and Autopilots. We're now proud to add our all new line of instruments to that mix. The FI-50 series blends traditional instrument displays with the very latest digital display and networking technology. Round out your helm today with Furuno's FI-50 NMEA2000 instrument series!

- Ultra-low power consumption
- Industry's most generous display area in a single-DIN footprint
- OLED display lighting increases night & dusk visibility
- Auto backlight dimming feature minimizes power consumption
- NMEA2000 interface for "Plug-and-Play" networking including our new NavNet 3D
- Easy installation with hole-saw flush-mount
- White-face "Formula 1" style gauges provide maximum sunlight viewable contrast
- Large, clearly defined control keys
- Various sensors and accessories, such as analog or NMEA2000 wind sensors and depth transducers

Automatic Backlighting Adjustment

The units minimize power consumption by switching its backlight off during daytime. The automatic backlight sensor on the front panel recognizes if ambient light is insufficient and FI-50 turns on bright backlight for viewing of displays.
