

Chart Revolution

Furuno's new NavNet 3D elevates chart plotting to a whole new level. Prepare to change your perspective!

TimeZero™ Technology NavNet 3D brings you an unprecedented chart plotter that seamlessly redraws your chart to any range desired, without the limitation of preset range scales. TimeZero™ technology sets a new standard for how marine chart plotters display and interact with both vector and raster charts in traditional 2D and eye-popping 3D views.

Satellite PhotoFusion™ High-resolution satellite photos are uniquely presented with our newly developed PhotoFusion™ technology, which fuses the photos with your raster or vector chart. Land areas are opaque and highly detailed, and as depth increases, the photos become more transparent, merging with chart data to provide you with the perfect view.
