

**When you're as serious about fishing as we are,  
you don't settle for second best.**

**Use Radar to locate  
birds feeding on  
bait fish.**

**Pinpoint the position  
of fish schools around  
your boat using sonar.**

**Find fish and view the  
sea bed contour with  
an echo sounder.**

Furuno sounders, sonars and even radars have found more fish than any other manufacturer in the world, and now we're finding more than ever! NavNet 3D's new Ultra High Definition (UHD) Digital Radar technology sets a new standard in marine radar. The new, high-powered FCV295 and FCV1150 employ Furuno Free Synthesizer (FFS) technology which permits a wide selection of operating frequencies from 28 to 200kHz. The world's first dual-frequency searchlight sonar, the CH300, is designed for a wide range of fishing vessels. When it comes to fishing above and below, look to Furuno for electronics you can depend on.
