

Furuno Firsts:

First Chart Plotter

First True Color Radar

You only get one chance to make a first impression.

We disagree.

First Echo Sounder

First Black Box Radar

First Ethernet Capable Network

First Customized Softkey menu

First Infrared Remote

First Course-up

First Hi-Res LCD Radar

First to use C-Map
or Navionics®

First Vector
Bathymetric Charts

The Next Furuno First: GP1900C

The first 10.4" sunlight viewable GPS/Chart Plotter to display external video input or send video out, customize the softkey menus and allow you to create routes from your PC way-point list. Because it is part of the NavNet family, you can network it to other displays or even get a Radar factory upgrade. Oh yeah, it has all the other firsts that we put in its predecessors like your choice of Navionics®, C-Map^{NT} or Furuno Cartography.
