

Reliability of Furuno, Flexibility of Ethernet Perfect Fit...

This Sunlight Viewable 7" color TFT LCD display can be customized to utilize any color combination that you desire.

With the push of the display button, you can easily select from more than 50 different display modes.

NavNet brings you the ability to display true color radar and overlay. True color Radar allows you to see the density of the targets that other color radars miss. Radar overlay places Radar targets on top of the chart to make navigating easier.

A common user interface and control panel is used on all of the NavNet products. This ensures that no matter which model you are using, when you connect another display, it will work exactly the same.

You want a fish finder? Unlike competitive systems that require purchasing a dedicated fish finder, NavNet allows you to add the 600W/1kW Dual Frequency Network Sounder and save thousands of dollars.

The "soft key" menu system allows you to easily access system features for whatever mode you are using. You can even customize the "soft key" menus for your specific needs.

Switching chart cards is right at your fingertips with this front loading mini chart card slot. You even have the choice of using Furuno and Navionics® or C-MapNT charts.

When you need electronics you can rely on, one name stands out from the rest, Furuno. For over 50 years, Furuno has proven time and again that our equipment is reliable, flexible and fits any application. From commercial fisherman and workboat operators to recreational boaters and sport fisherman, they all depend on Furuno. Now more than ever, demand the best, demand Furuno!
