

# NOTICE

## Do This First!

- Connect the transducer to the DFF3-UHD (see the installation manual for connection details).
- Transducer models with Airmar Xducer ID<sup>®</sup> are automatically detected by the DFF3-UHD and listed under TDID. For other transducers select your model from the transducer list found in the transducer setup menu in the MFD's Fish Finder settings.
- Disconnect power to the DFF3-UHD and turn off all NavNet MFDs. **Failure to perform this procedure will not allow you to setup the frequency presets.** Re-apply power to the DFF3-UHD and the MFDs. Continue to setup the DFF3-UHD and the MFD per the installation manual.
