Furuno Unveils CSH10 360-Degree Omni Scanning Sonar With Cutting-Edge Features To Maximize Your Catch

October 30, 2024

Camas, WA - Furuno is proud to introduce the CSH10, a state-of-the-art 360-degree Full-Circle Omni Scanning Sonar designed for commercial fishermen to target and track migrating species like hake and pollock. With a host of advanced features, the CSH10 provides real-time detection, increased range, and unparalleled clarity, making it an essential tool for improving fishing efficiency and success.

The CSH10 stands out with its 83.5 kHz high-frequency Sonar, delivering sharper beam width for detecting schools of fish in shallow waters while improving long-distance detection. With a faster detection speed compared to traditional Searchlight Sonars, fishermen can track schools of fish more effectively, ensuring that no opportunity is missed.

Key Features for Fishing Success:

- **Beam Stabilization:** Furuno's unique three-axis stabilization technology ensures clear and stable images even in the harshest conditions, tracking schools of fish with power and precision.
- **Fish Quantity Mark & Target Lock:** Track and analyze fish schools with ease. The Fish Quantity Mark feature provides vital data such as the size, distance, and depth of schools, while the Target Lock function lets you automatically track and maintain focus on your targets.
- **Enhanced Clarity & Range:** With display colors doubled from 16 to 32, fish echoes are now even easier to identify. Improved image resolution and detection range of up to 900 meters (nearly 3,000 feet) provide clear views of underwater topography, wrecks, and fish activity.
- **Compact, User-Friendly Controls:** The new, smaller control unit incorporates an intuitive RotoKey™, tilt lever, and trackball for seamless operation. Wireless remote control capabilities allow fishermen to manage up to four units from a distance, maximizing flexibility and convenience.
- **Compatible with NavNet TZtouchXL:** View and fully control your CSH10 Sonar directly from your TZtouchXL MFD (coming Q1 2025).

With its rugged design, faster hoist speed, and transducer enhancements, the CSH10 is built to handle the demands of professional fishing. Whether you're monitoring the net shape, tracking fast-moving fish schools, or navigating fishing grounds in challenging seas, the CSH10 will elevate your fishing operations to new levels.

Furuno is the world leader in marine electronics, providing innovative solutions for the fishing, commercial, and recreational marine industries for over 85 years.
