Furuno TZtouchXL With TZ MAPS Delivers Astonishing Chart Detail, All- New Safety Features, And More!

February 14, 2024

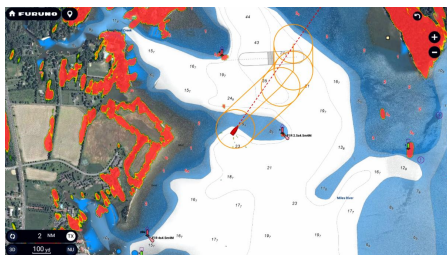

Camas, WA - Furuno, a renowned name in the world of marine electronics, is proud to introduce the NavNet TZtouchXL series, designed to elevate the cruising and pleasure boating experience to new heights. With a perfect blend of cutting-edge technology and user-friendly features, these Multi Function Displays (MFDs) are set to redefine your voyages on the open water with five different sizes of MFDs that combine cutting-edge technology with a user-friendly interface. The NavNet TZtouchXL series introduces exclusive, never-before-seen features in navigation devices, such as the all-new TZ MAPS with AI Routing. Plus, they pack all of the power and performance that has made Furuno the electronics of choice for cruisers, all wrapped in a fresh and simple-to-use user interface.

With TZ Maps, creating detailed new routes is a breeze!

An all-new chart offering called TZ MAPS sets these MFDs far ahead of the field. Cruisers and pleasure boaters will appreciate the detailed coastal charts and the ability to plan their journeys with ease. With TZ MAPS, the navigator completely controls what map data they want to download, including chart areas, satellite photos, and bathymetric data that can be tailored to meet your viewing needs on the fly. Purchase of any TZ MAPS area also unlocks added functionality, such as powerful AI Routing that intelligently plans out routes, taking into consideration the boat's draft and navigational obstacles. To round it off, the purchase of any TZ MAPS chart unlocks those charts in the free [TZ iBoat](#) app for mobile devices such as a phone or tablet, allowing the navigator to have a home planning app that will transfer their points and routes directly to the TZtouchXL. With a free TimeZero account, waypoints and routes can be easily backed up or retrieved from the cloud with just a few taps, ensuring all of the data they've worked so hard to create remains safe and secure. TZ MAPS redefines cartography with the ability to mimic the appearance of raster charts while remaining fully vector. Custom depth color shading and bathymetric data overlays create navigational charts of unmatched detail and clarity, rendered with a variety of color palettes to provide cruisers with an electronic charting experience that goes far beyond any premium chart service before it.

AI Avoidance Route™ detects hazardous objects and instantly calculates the safest route to avoid them

When connected to a DRS Radar, two new, powerful safety features that cruisers will love are unlocked: Risk Visualizer™ and AI Avoidance Route™. Risk Visualizer™ is a unique function of Furuno Radars that provides a 360° visual representation of potential collision risks with approaching objects around the vessel. Unlike CPA/TCPA alarms, which indicate only the risks visible on the ship's current course, Risk Visualizer™ assesses all of the objects around the vessel. Dynamic icons are automatically created for targets with the highest probability of collision, ensuring the captain has the information they need to maintain safe distances when passing. The new AI Avoidance Route™ feature takes all the information provided by the Radar and instantly provides a safe route around those hazards, which can be sent to a Furuno NAVpilot series autopilot with a single tap.

For those looking for an added element of control, two new remote control options are available: The vertically-oriented MCU006 and horizontal MCU006H, each capable of controlling any TZtouchXL MFD in the network. Both feature a comfortable RotoKey™ and beveled buttons for enhanced ease of use. The ten dedicated dual-purpose buttons operate different functions, including the ability to access the Edge Swiping functionality that makes the NavNet TZtouch series so easy to use.

Furuno, a pioneer in marine electronics since 1948, continues its legacy of innovation and excellence with NavNet TZtouchXL. For cruisers and pleasure boaters seeking the best in technology and comfort, NavNet TZtouchXL is the ultimate companion on your journeys to explore the beauty of the seas. Experience the future of cruising and pleasure boating technology with Furuno's NavNet TZtouchXL.
