

# DFF3D Software History

## **V1.06 Software (Feb 2022)**

Improved: Seabed echo and schools of fish are not displayed until the range stabilizes after the seabed is detected in Auto Range.

Improved: Roll Sensor Offset and Pitch Sensor Offset can be adjusted even if external motion sensor like Sat Compass is used, in the same way as the built in sensor.

## **V1.05 Software (June 2020)**

Improved: User defaults changed to allow better out of the box experience without adjustments.

## **V1.04 Software**

Improved: External KP wiring no longer required when running with DFF3 and DFF3D together on the same boat. (automatic KP via network added)

## **V1.03 Software (initial version)**
