## TZT2BB Software History

# **TZT2BB Software History**

***(Note: TZT2BB OS software is NOT the same as TZTL (TZTL12F and TZTL15F) OS software)***

## **V9.80 (March 2025) Available by Wi-Fi for v9 or higher customers**

- New: When a TZT10X/13X/16X built-in Fish Finder is connected to a TZT2BB, the new Airmar transducers (SS175L, SS175M, SS175H, SS175HW, M265LH, M265LM, M285HW, and TM260) supported by TZT10X/13X/16X V25.11 can be configured on the TZT2BB. Note that the built-in Fish Finder of the TZT2BB does NOT support physically connecting these transducers.
- New: When the TZT10X/13X/16X built-in CHIRP Side Scan is networked, Auto Gain can be set up on the TZT2BB screen.
- Improvement: Performance is stabilized while showing the Tide graph in the Data Box. Previously, the display could sometimes become unstable while showing the Tide graph in the Data Box.
- Improvement: Visibility of tracks under Night and Dusk modes is improved.
- Improvement: When connecting to the FLIR M400, prevents the screen from periodically going dark.

## **V9.56 (January 2024) Available by Wi-Fi for v9 or higher customers**

Minor update to allow larger font sizes and support of new MCU006 controller.

- Improved: Fonts now can be made larger for instrument data pages
- New: MCU006 controller support
- Fix: EBL software bug
- Updated: Marine Zone Forecast- zones updated
- Fixed: MCU004 will now allow default selection to be other than one plugged into
- Fixed: Event Button extra touch no longer required
- Fixed: SST source not giving expected results on some large systems
- Improved: PBG and system memory management
- Improved: Can display up to 6 engines (previously 4)
- Improved: Added HTML5 partners – JL Audio, Maretron Digital Switching, Dometic Digital Switching, Lumishore Bottom Light.
- Fix: CZone alarms will not regenerate after acknowledgment

## **TZT2BB v9.5 OS/APP Oct 2022**

Including Follow-It, Improved Slide up menu, Improved Tracks, additional DFF3-UHD features and other features and improvements.

- New: Follow-It feature using DFF3D generated bathy lines
- New: Solid Black background for Instrument display pages

- New: Selectable Furuno name in addition to the standard "Home" button
- Improved: Slide up menus
- Improved: Tracks
- Improved: available smaller Points size and default setting
- Improved: Brighter AIS colors for nighttime mode
- Improved: Features for DFF3-UHD Tru-Echo CHIRP Fish Finder

## **TZT2BB v9.01 OS/APP     June 2022**

### **Brand New Features**

- New: PBG Spot soundings (with DFF3D)
- New: PBG Sync (with DFF3D)
- New: Automatic download setting of NavCenter weather on power up
- New: ARPA Target Nick Names
- New: Trim Tab information for Data box and Instrument pages
- New: Second function (programable) for Event button
- New: FLIR M300C video can be shown via Ethernet

### **Plotter**

- Improved: Position entry edit and find
- Improved: Event button, second function added by long tap (press)
- Improved: Larger Route Bar font

### **Radar**

- New: Channel mode added as a selection for Auto mode (DRS software required as well)
- New: ARPA Target nickname
- Improved: Name of Advanced Auto mode changed to Adaptive

### **Fish Finder**

- New: PBG Start/Stop Sync (DFF3D)
- New: Spot Soundings (DFF3D)
- New: Sunlight color for Fish Finder and DFF3D
- Improved: Fish-It added to DFF3D screen
- Improved: PBG Speed Filter alarm

### **Others**

- Improved: Fish Mapping function with SiriusXM receiver BBWX4 is improved: E.g., only available fish species are listed on the screen.
- Improved: Three (3) waypoints are output via PGN: 129285 for an active route. (Previously, only two (2) waypoints were output.)
- Fix: Login to My TIMEZERO account with Apple ID is fixed.

## TZT2BB v8.01 OS/APP    October 2021

- New IP video support for FLIR M300 cameras
